

# 3 Day Workshop on PCB Designing

---

26 Nov'17 to 28 Nov'17, 20 Jan'18-25 Jan'18

Circuits being the core integral part of an electronics student, the knowledge of knowing to design and fabricate own printed circuit board is vital. With this consideration on mind, we took an initiative to train our students from second year to undergo a 3 day workshop on this, so at the end of three days they were able to put layout, design, implement and fabricate their own PCB's. The introduction of the software's used were covered day one, followed by which the procedural training on the day 2 and the actual fabrication were made by the students for their designs on the final day. All the PCB's were made to pass through a testing process also. Thus the students in future can design and fabricate their own PCB's without outsourcing it for their projects. Department of ECE has signed MOU with Thick India, Coimbatore.
